PROFESSIONAL SUMMARY

Game Developer with strong C++ and C# programming skills and hands-on experience developing gameplay systems in Unreal Engine 5, Unity, and Godot. Experienced in game architecture, systems programming, AI, physics simulation, and 3D asset integration using Blender. Passionate about creating engaging gameplay experiences and collaborating with multidisciplinary teams.

SKILLS

- **Programming:** C++, C#, SQL
- **Game Development:** Gameplay Programming, Physics Systems, AI, Collision Detection, UI Development
- **Game Engines:** Unreal Engine 5, Unity, Godot
- **Software Engineering:** Object-Oriented Programming, Data Structures, Algorithms, Debugging
- **Tools:** Git, Visual Studio, Blender, Perforce, Jira

EDUCATION

Bachelor of Science in Game Development (B.S.) February 2026
Full Sail University, Winter Park, FL
- Honor: Salutatorian | Cumulative GPA: 3.93/4.0.
- Relevant Coursework: Artificial Intelligence, Game Integration, Game Architecture, Engine Development, Systems Programming, Software Engineering, and Physics.

Associates of Science (A.S.) May 2023
Tidewater Community College, Virginia Beach, VA
- Relevant Coursework: Programming with C++, Advanced Computer Organization, and Calculus I and II.
- Computer Club member and Coding Club Vice President.

EXPERIENCE

Behind The Lines - Team Game Project October 2024 - November 2024
Full Sail University, Winter Park, Florida
- Collaborated with classmates to develop a Tetris inspired Windows game.
- Developed gameplay involving falling pieces, line clearing, and an enemy mechanic to interfere with player pieces.
- Implemented and tested gameplay functionality in Visual Studio with C++.

Project Built with Win32 API in C++ March 2025 - February 2026
Full Sail University, Winter Park, Florida
- Demonstrated Project development applying C++ and Win32 API, paying attention to its nature and scope.
- Integrated with emphasis to message driven architecture to utilize different techniques from other console techniques.
- Looked at uses of dialog boxes, Windows common controls, and dynamic-link libraries.

Creation With Techniques Used By Industry Programmers August 2023 - February 2026
Full Sail University, Winter Park, Florida
- Employed the Implementation of reusable application technology.
- Performing algorithm analysis.
- Applied use of industry tools and platforms to complete projects.

Project Development With 3D Game Engine October 2024 - February 2026
Full Sail University, Winter Park, Florida
- Integrated dynamic interaction of 3D objects utilizing game engine systems.
- Building systems to detect and react to collision between two or more objects.
- Simulated physics addition for more realistic dynamic movements of a 3D object.
